

Regarding the rejection of claim 3, in the Offices view, "it is often desirable to create openings for windows or doors in building walls". We are not claiming window or door openings in a building wall, we are claiming a building block large enough to accommodate a window or door opening precast within one single block. All other buildings constructed of building blocks must use a plurality of blocks stacked one upon another to form a window or door opening.

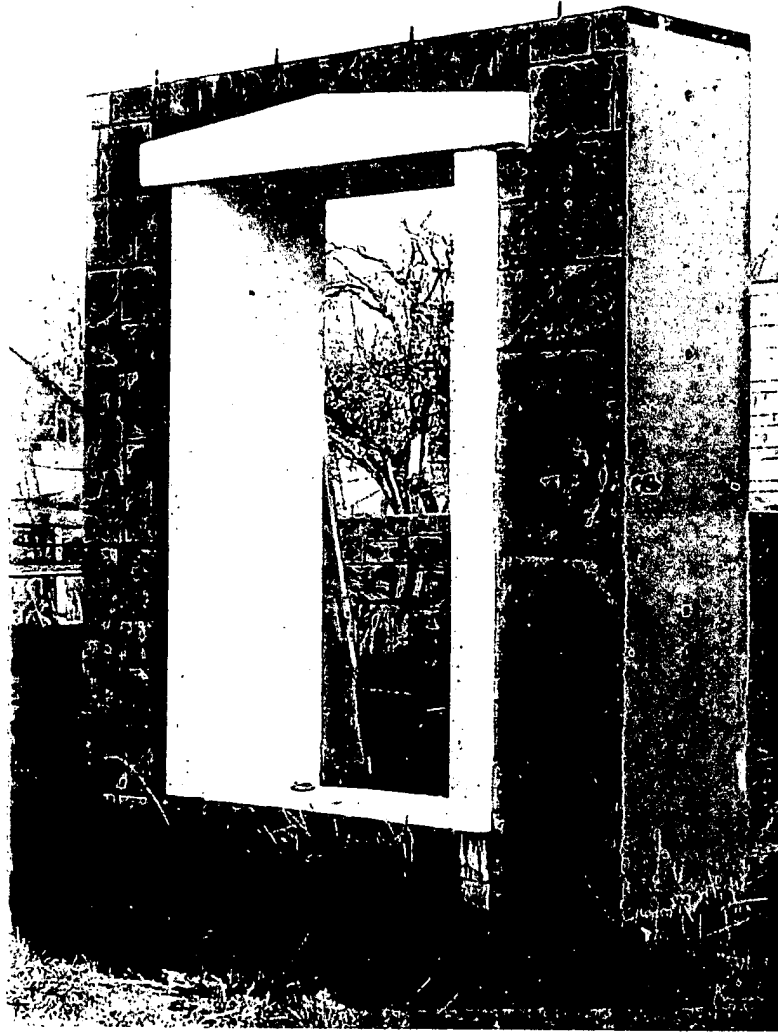

Applicants believe that claims 1 – 3 are allowable and we respectfully request that they be allowed. If any challenge to the allowance of the claims arises and can be alleviated with a phone call please call Dennis Broderick at 801-702-7586.

This picture depicts a single block. As you can see, this one is stamped (in this case to resemble stone). It is one story high and it has a doorway formed inside it. This one block has characteristics we claim as our invention:

One single block, one story in height;
One single block, able to be stamped;
One single block, large enough to
accommodate a window opening OR a
doorway.
